& speaker quality

Cloud-based provisioning  
& management

Room calendar  
& meeting start OSD

Built-in occupancy sensor  
for usage data & automation

# Easy to Deploy, Easy to Use, Easy to Manage

## Dual LAN ports

- Enable different applications on different physical networks to fit your infrastructure. Put voice or AirMedia (or both) on a secondary LAN port to keep it segmented

## Universal TV control

- Control any TV in your rooms. Crestron supports RS-232, CEC, and IR control while allowing you to add your own drivers

## USB Camera In & Out

- Use the room camera rather than the laptop camera for web conferencing so that the far end can see the whole room.
- Plus, enjoy superior audio, leveraging the professional built-in speakers and microphone.

## HDMI® In & Out

- Display video conference screen and presentation content running on your laptop on the large screen TV in the room.
- Connect a laptop or other HD source (optional – activate and manage license as needed)

## Microphones

- Add up to two Mercury microphone pods for larger tables – provides convenient remote mute buttons for participants at seats all around the table

## Power over Ethernet Plus or 24V power supply
